Study predicts shift to smaller animals over next century. And even though modern cetaceans have bodies fully adapted for life in water, traces of their land ancestry are still present in cetacean embryos: modern cetaceans lack hind limbs, but their embryos still have the beginnings of hind limbs. For quadrupeds, there are three main categories: walking gaits, running gaits. But it also means that protecting the migration corridor is more challenging because it is a mosaic of federal, state, and public land. This private channel is used by some rodents in, for example, mother-to-pup communication, and by bats when echolocating.

The Wikibook Dichotomous Key has a page on the topic of: Mammalia. The fact that the mule deer's journey takes place entirely outside protected parks or reserves makes it especially remarkable, says Sawyer.
