Tools can then be built that use the artifact model as the foundation of their repository structure and the task and workflow models as the basis for the supported functionality. These detailed case studies range from telecommunication service specification, hypermedia design, and data warehousing to cooperative requirements engineering, chemical device modeling, and design of new abstraction principles of modeling languages.

His area of expertise is on engineering of methods including specification and design of software engineering methods. The second, and larger, portion of the book reports on applications of the metamodeling approach to method engineering. Nick Russell Wil M.

Method fragments and method chunks are then described formally followed by Eds.
